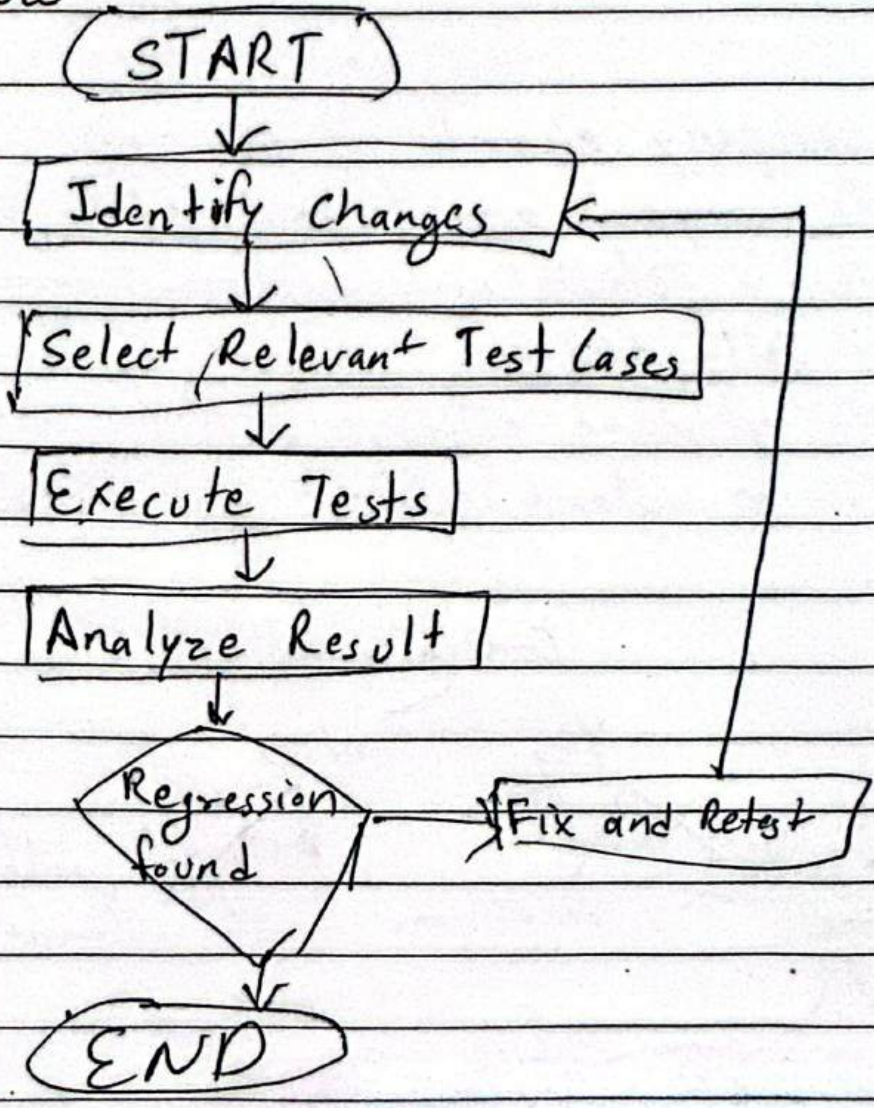
Regression Testing

It ensure recent code changes do not negatively affect existing functionality.

Workflow



Memo No.
Mo | Tu | We | Th | Fr | Sa | Su
Date / /

Types

1. Partial Regression - Test chaged + Potentially impacted areas.
2. Full Regression - Test the entire test suite.
3. Corrective - Test after a minor change or bug fix
4. Progressive - New features added then check impac
5. Selective - Test only affected areas
6. Unit Regression - Regression at unit level by dev.

Smoke Testing

It checks whether the major features are working. to ensure that the build is stable enough for further testing

Key Components

1. Critical Test suite - small set of Predefined test case that cover the most imp functions
2. Test Environment. Env where build is deploy
3. Build Verification Mechanism :- Here it execute smoke test and evaluate the result
4. Reporting :- test reports generates.

Sanity Testing

It verifies that specific bug fixes or recent changs work correctly. Narrow and focused on affected areas. it is performed after bug fixes patches or minor ~~etc~~ enhancement. Mostly unscripted.

End to End Testing

It verifies a complete User journey from start to finish

UI → API → database → External service

END to End Food Delivery App

Open App
↓
login
↓
Select food
↓
Place order
↓
Make payment
↓
order delivered

End to End scenairo for QA demo store

Test . Setup

↓ Create / Login test user

Demo QA Book store UI

↓ Get /Bookstore/v1/Books

Select "Git Pocket Guide"

↓ Get - ISBN for git pocket

Click "Add To your collection"

↓ Post / Bookstore/v1/Books

DB → User → ISBN saved

↓ Get /Account/v1/user/{userId}

Verify collection contains ISBN

↓

UI - Profile

↓

"Git Pocket Guide" displayed.

UI - Open /books → search Git Paket Guid → capture

UI click Add to your collection

API → Post Book with userId + ISBN

DB → Verify the user-book relationship persisted

API - Get acc. verify same ISBN exists

UI → Open Profile /collection → verify Git Pocket appears

3) Experience Based Techniques.

The testing done through your own experience, intuition and knowledge from past ~~mistke~~ mistake.

For eg- A doc with 20 years of experince in there field can tell what's wrong with paetient with just few tests.

Memo No. ______
Date / /

i) Error Gussing

With the past experience the tester to guess what is most likely causing the bug.

for eg:- The experince personal knows when make a email field you know user often paste extra spaces into the field at the end or start.

ii) Exploratory Testing.

In this testing we learn about the app while testing it, with no fixed script.

for eg:- Tester open new shopping app and just click around, add items remove them, trying weird combos to see what breaks.

iii) Checklist Based Testing

This testing use checklist with is build from past experience.

for eg:- A pro tester knows what are the functio that cause most problems so, the tester build his checklist based on that.
