

Week 3 Day 2

Static Testing and Dynamic Testing

- Static testing is done or performed without executing the software code. It is done to identify defects at the early stage and prevent future error. Reviews, walk through, inspections

- Dynamic testing performed by executing the software application. Identify defects during execution. functional, non-functional, Black Box, white box testing, etc.

Review ~~Types~~

Software review is a systematic inspection of software by one or more individuals who work together to find and resolve errors and defects in the software during the early stages of the SDLC

Types of review

1. Software Peer Review

A colleague reviews someone's work to identify errors, improve quality, and provide feedback.

- a) Code Review - Computer source code is examined in a systematic way
- b) Pair Programming - ~~code~~ It is a code review where two developers develop code together at the same platform.
- c) Walk Through - The author explain the Plan/ta or code to other members.
- d) Inspection - It is a most formal review technique
- e) Audit - It ensure that the app complies with standards, regulations and contractual agreement.

2. Software Management Review

It evaluates work status and helps make decisions regarding downstream activities

3. Software Audit Reviews

An external review where independent critics inspect the software product and its processes to check compliance with specifications and standards.

Roles

- 1. Moderator - The review leader who coordinates the process, checks entry criteria, and leads the discussion

2. Author - The writer of the document under review whose goal is to learn how to improve the document quality
3. Scribe / Recorder. The person that notes down all defects, errors, and feedback suggestions
4. Reviewer: checks for defects and improvements using technical standards and domain knowledge
5. Manager: Schedules reviews, allocates projects and checks objectives.

UI Testing

It validate a application UI looks, behaves, and responds as intended.

Types of UI Testing

- i) Functional Testing
- ii) Visual Testing
- iii) Usability Testing
- iv) Accessibility Testing

Usability Testing

- i) Navigation & Consistency
- ii) Content Clarity
- iii) User Control & Error Prevention
- iv) Efficiency & Speed
- v) Responsiveness.

WCAG (Web Content Accessibility Guidelines)

It's an international standards for making web content accessible to people with disabilities.

Principle of WCAG

i) Perceivable

Information must be presented so user can perceive it (eg. alt text)

ii) Operable

Navigation and controls must be usable by everyone (eg. keyboard-friendly)

iii) Understandable

Content and operation must be clear and predictable.

iv) Robust

Code must work reliably with current and future assistive tech.

WCAG categories

i) Level A - Most basic level

ii) Level AA - Mid range standard for most organizations and law

iii) Level AAA - The highest and most stringent level of accessibility.

Review Process

- i) Planning - It decide what, why, how and when to review
- ii) Review Initiation - It make sure everything and everyone is ready before starting.
- iii) Individual Review - Each reviewer checks the work product individually.
- iv) Communication and Analysis - The reviewers discuss and analyze the problems they found.
- v) Fixing and Reporting - The identified defects are fixed and recorded.

Error found at home page of buggy

One tab is used to ~~negative~~ through the logo at the nav-bar & doesnot work when clicked with the mouse.

Design check list for ~~to~~ Landing Page for buggy. justtestit.org

5 UI/UI improvement for Para bank.

- a) Modernize the overall UI
- b) Improve mobile responsiveness
- c) Improve navigation hierarchy
- d) Improve login form usability
- e) Make Login/Reg buttons more prominent.

Business impact

- Improve user trust and usability
- Make banking easier on mobile devices
- Help users find features faster
- Reduces login errors and user frustration
- Helps users complete key actions faster.
