Test Execution Report

Portfolio Website Automation Suite (Playwright + Pytest)

Application under test	https://shekharrawal.com.np
Test source	github.com/Shekhar969/portfolio — src/tests (commit 7d7e248)
Framework	Python 3.13, pytest 9.1.1, playwright 1.63.0, pytest-playwright 0.10.0, allure-pytest 2.16.2
Report date	15 October 2026
Prepared for	Shekhar Rawal

Execution status: tests were NOT executed for this report.
The report was prepared in a sandbox that cannot download a Playwright browser and cannot reach shekharrawal.com.np, so no test could be run. Every result below is therefore marked **Not run**; no pass/fail figures have been estimated. Section 5 gives the command to execute the suite and a table to record the real results.

1. Summary

Page	Test file	Total	Runnable	Skipped	Executed	Passed	Failed
Home	test_homepage.py	10	10	0	0	-	-
Projects	test_project.py	8	8	0	0	-	-
Contact	test_contact.py	10	9	1	0	-	-
Total		**28**	**27**	**1**	**0**	**-**	**-**

"-" means not available because the suite was not executed.

2. Scope and approach

The suite is a set of end-to-end UI checks that drive a real browser against the live, deployed portfolio site. Locators are role- and label-based (get_by_role, get_by_label), which makes the tests resilient to styling changes. Pages covered: Home (/), Projects (/projects) and Contact (/contact). No API, database or cross-browser tests are present in the repository.

3. Test case inventory and results

3.1 Home page — test_homepage.py

ID	Test case	What it verifies	Result
HP-01	test_homepage_loading	URL is the base URL; heading "hi Shekhar here." is visible	Not run
HP-02	test_resume_link	Main nav shows a Resume link with href /resume	Not run
HP-03	test_resume_opens_page	Clicking Resume navigates to /resume	Not run
HP-04	test_photos_loaded	Every image in the "Photos of Shekhar" group decodes with naturalWidth > 0	Not run
HP-05	test_education_headings_loaded	Education tab shows Siddhanath Science Campus, Little Buddha Academy, Mahakali Modern Public School	Not run
HP-06	test_experience_headings_loaded	Experience headings Grow, Kayo badger, Dipshikha Dhitopatra Karobar Co. Pvt are visible	Not run

ID	Test case	What it verifies	Result
HP-07	test_featured_projects_loaded	At least one project article and the "featured projects" heading are visible	Not run
HP-08	test_footer_loaded	Footer nav shows Home, Projects, Contact, Resume, GitHub, LinkedIn, Email links	Not run
HP-09	test_footer_copyright_and_privacy	"© 2026 Shekhar" text and Privacy link are visible	Not run
HP-10	test_theme_toggle	Theme button flips its aria-label between light/dark and back to the initial value	Not run

3.2 Projects page — test_project.py

ID	Test case	What it verifies	Result
PR-01	test_projects_page_loads	URL is /projects; heading "my projects." is visible	Not run
PR-02	test_project_search_loaded	"Search projects" search box is visible	Not run
PR-03	test_category_filters_loaded	"Filter by category" group is visible and has at least one button	Not run
PR-04	test_projects_are_displayed	Every project card is visible and contains a heading	Not run
PR-05	test_project_search_filters_results	Nonsense query yields 0 cards; clearing it restores the original count	Not run
PR-06	test_category_filter_works	Each category button toggles aria-pressed=true; resetting to All works	Not run
PR-07	test_projects_footer_loaded	Footer nav shows all seven expected links	Not run
PR-08	test_project_page_privacy_and_copyright	Copyright text and Privacy link are visible	Not run

3.3 Contact page — test_contact.py

ID	Test case	What it verifies	Result
CT-01	test_contact_page_loads	URL is /contact; heading "Get in touch." is visible	Not run
CT-02	test_contact_form_fields_visible	Name, Email, Subject and Message fields are visible	Not run
CT-03	test_contact_form_accepts_input	All four fields accept typed values and retain them	Not run
CT-04	test_contact_form_character_limits	maxlength attributes (100/254/150) and 5000-char message cap	Skipped (marked in code)
CT-05	test_contact_form_message_counter	Counter starts at 0/2000 and shows 16/2000 after 16 characters	Not run
CT-06	test_contact_email_field_type	Email input has type=email	Not run
CT-07	test_contact_social_links	GitHub, LinkedIn and Email links are visible	Not run
CT-08	test_contact_form_submit_button	"Send message" button is visible	Not run
CT-09	test_contact_form_rejects_invalid_email	"invalid-email" fails browser validity check	Not run
CT-10	test_contact_footer_loaded	Footer nav shows Home, Projects, Contact, Resume	Not run

CT-04 carries `@pytest.mark.skip` in the source with the reason "User can type n number of words but there is a limit for sending", so it would be reported as skipped on any run.

4. Observations from reading the test code

These come from static review only, not from running the tests.

#	Observation	Suggested action
1	README run commands name test_home.py and test_projects.py and use ./tests, but the real files are test_homepage.py and test_project.py inside src/tests.	Update the README paths.
2	info.txt lists conftest.py, test_navigation.py, test_links.py, test_api.py, test_database.py and .env; none exist.	Delete or update info.txt.
3	__pycache__/*.pyc files are committed (including CPython 3.14 builds).	Remove them and add __pycache__/ to .gitignore.
4	HP-06 (experience) checks headings without opening a tab, while HP-05 (education) clicks a tab first. Confirm the experience section is visible by default.	Verify on first run.
5	CT-04 is skipped, so input length limits are untested. The README also lists it as coverage.	Rewrite it to match the real limits, or remove it.
6	PR-06 clicks the All button with exact=True, but the follow-up assertion looks it up by name="All" without exact=True; a second button whose name contains "All" would make that locator ambiguous.	Use exact=True in both places.
7	Tests depend on the live production site and its exact copy (headings, © 2026). Text changes or a new year will fail them.	Parameterise the year; consider a BASE_URL option.
8	BASE_URL is duplicated in all three files; there is no conftest.py.	Move shared config to conftest.py.

5. Running the suite and recording results

From the src/tests directory, with a virtual environment and the dependencies from requirements.txt installed (pip install -r requirements.txt, then playwright install):

```
pytest -v --junitxml=report.xml --alluredir=allure-results
```

report.xml gives per-test pass/fail/skip and timings; allure serve allure-results opens the visual Allure report. Share either with the author of this report to have the figures below filled in.

Results to be completed after execution
